- Hands on experience on Android, iOS platforms in creating Hybrid / Native applications.
- Nice to have Test Driven development.

- Good understanding of REST and JSON based web services and ability to coordinate requirements with server API teams.

Position: Python Developers

Job Description

We are looking for a Python Web Developer responsible for managing the interchange of data between the server and the users. Your primary focus will be the development of all server-side logic, ensuring high performance and responsiveness to requests from the front-end. You will also be responsible for integrating the front-end elements built by your co-workers into the application; therefore, a basic understanding of front-end technologies is necessary as well.

Skills

- Familiarity with some ORM (Object Relational Mapper) libraries
- Able to integrate multiple data sources and databases into one system
- Understanding of the threading limitations of Python, and multi-process architecture
- Good understanding of server-side templating languages **{{such as Jinja 2, Mako, etc depending on your technology stack}}**
- Basic understanding of front-end technologies, such as JavaScript, HTML5, and CSS3
- Understanding of accessibility and security compliance **{{depending on the specific project}}**
- Knowledge of user authentication and authorization between multiple systems, servers, and environments
- Understanding of fundamental design principles behind a scalable application
- Familiarity with event-driven programming in Python
- Understanding of the differences between multiple delivery platforms, such as mobile vs desktop, and optimizing output to match the specific platform
- Able to create database schemas that represent and support business processes

Proficient understanding of code versioning tools **{{such as Git, Mercurial or SVN}}**
